01 Scope and technologies

This policy applies to the EVREN FX website operated by EVREN Markets Limited, a company incorporated in Saint Lucia under registration number 2026-0075. References to cookies in this document also cover browser storage technologies that serve similar purposes.

Cookies are small pieces of data that a website can store in your browser. First-party cookies are generally set by the website you are visiting, while third-party cookies may be set by external services included on the page. Session cookies generally expire when the session ends. Persistent cookies can remain until they expire or are deleted.

localStorage and sessionStorage are browser storage mechanisms that differ from cookies. They are generally not sent automatically with every request in the way cookies are. sessionStorage is normally used for the current page session; localStorage generally remains until it is cleared or managed by the relevant application. Actual behaviour depends on the browser and the service implementation.

02 Display and essential functions

The website may use browser capability checks, interface state information or administration-area authentication to support correct page display and access to protected areas. These purposes differ from advertising tracking. The presence of a storage item alone does not mean it is a marketing record.

The website uses a sessionStorage item named wpEmojiSettingsSupports to store the result of a check of the browser's support for displaying emoji. It supports page display and is normally cleared when the tab session ends. The browser's session-restoration behaviour may affect how long it remains.

WordPress administration login may use cookies such as wordpress_test_cookie, wordpress_logged_in_*, wordpress_sec_* and wp-settings-* for cookie-support checks, login authentication or administration-interface preferences. These items may be used when the relevant login or administration functions are accessed; they are not necessarily received by every ordinary visitor. Their expiry depends on login choices and system settings.

03 Storage on public pages

The current public pages mainly use the display-related storage described above. Ordinary browsing does not require you to log in to the website's administration area. The cookies and other storage actually present may vary with page content, login status, existing third-party accounts, browser restrictions and service updates. You can inspect the records on your device through your browser's site-data settings.

The current website contact form does not use advertising or analytics cookies to determine whether a submission is allowed. A hidden anti-spam field helps identify automated submissions, and enquiries are saved in the website's administration system. Browser storage is separate from these stored enquiry records.

04 TradingView, fonts and external images

The home page and some market pages load TradingView market-data scripts and embedded frames to display market quotes. These requests go directly to the relevant service provider, may include the referring page, and allow the provider to receive the IP address, browser and device information needed to establish the connection. Cookies or other technologies used within the service may vary by region, browser settings and service configuration.

The website retrieves fonts from Google Fonts and may load images supplied by external websites. Even where these requests do not write cookies to your device, the provider may still receive the network-request information needed to load the resource.

External providers process information under their own rules. You can consult TradingView's Privacy Policy and Cookies Policy, and Google's Privacy Policy, and use your browser's third-party content or storage controls to make relevant choices. We do not treat every storage item used by an external service as an essential cookie of this website.

05 Analytics, marketing and consent

The website currently has no directly configured standalone Google Analytics component or advertising tracking pixel. External embedded content may still have its own data-processing rules. If we introduce analytics or marketing purposes in the future, we will update this policy accordingly and provide choices as required by applicable law.

The website does not currently provide a separate cookie-preferences panel, and some third-party content loads with the page. You can use your browser settings to restrict third-party cookies, scripts or external resources. Merely browsing a page, continuing to visit the website or submitting an enquiry should not be treated as consent to optional tracking purposes for which consent is legally required.

06 Viewing, restricting and deleting data

Your browser's Privacy and Security, Site Data or similar settings generally allow you to view cookies and stored data for a particular website, delete existing records, block third-party cookies or create exceptions for specific websites. Settings need to be managed separately for different devices, browsers and browser profiles.

Chrome, Edge, Firefox and Safari provide relevant help information. Use the help feature in your current browser for up-to-date instructions. Some private-browsing modes or content-blocking tools can also restrict external requests, but their effect depends on their configuration.

Clearing all site data may sign you out of a logged-in administration account or reset interface settings. Restricting external content may prevent market quotes, fonts or images from displaying correctly. Deleting browser cookies or storage does not automatically delete enquiries already submitted to the website's administration system. To request deletion of an enquiry record, follow the process described in our Privacy Policy.

07 Retention and changes to settings

How long a cookie remains depends on its expiry settings, browser rules and your deletion choices. Session storage normally ends with the relevant session; other storage may remain until you clear it or the relevant application updates it. Providers may also change their technical settings. You can inspect actual records in your browser's developer tools or site-data panel.

The same service may store data differently across devices, accounts or pages. When website functions or third-party services change, we will review the relevant technologies accordingly and update the descriptions of their purposes, available choices and policy terms where needed.

08 Updates and contacting us

This policy and our Privacy Policy together explain how information is handled through the website. The latest version is available through the Cookies Policy link in the EVREN FX website footer and states its update date.

If you have a question about a cookie, browser storage or external content, please use the website's Contact Us page and include the page visited, your browser type and a description of the issue. Do not send cookie values, login tokens, passwords or other authentication information in your message.
